FIBC BULK BUYERS GUILD

FIBCs, or Flexible Intermediate Bulk Containers are industrial containers made of flexible polypropylene fabric that is designed for storing and transporting dry, flowable products, such as sand, fertilizer, chemicals, food products, etc.

www.k-packings.com

TYPE A FIBC

In common with:

- Can be used for dry product of all industries

Stay away with:

- In fire-prone areas
- Containing flammable materials

This is a standard industrial bag, without electrostatic protection

Manufactured using conventional woven polypropylene. Type A has 4 reinforced lifting rings at each corner

TYPE B FIBC

In common with:

- In area without gas or flammable liquids such as gasoline or oil
- Contains DRY powdered flammable material

Stay away with:

- Containing general hazardous materials

It is constructed from insulating fabric (breakdown voltage less than 6 kV) Manufactured using conventional woven polypropylene. Type B has 4 reinforced lifting rings at each corner

TYPE C FIBC

In common with:

- In fire prone areas
- Contains flammable powder

Stay away with:

- In flammable environments
- There is no grounding point

The textile fabric of this product has a network of conductive tape to ground the bag itself during filling and discharging to prevent dangerous electrical discharges and sparks if properly grounded.

In common with:

- Non-hazardous materials
- Locations with non-hazardous conditions

Stay away with:

- When transporting flammable or hazardous materials
- When flammable materials or gases are present in your location
- When a flammable atmosphere with minimum ignition energy less than 1,000mJ is present

Made from electrostatic dissipation material to help control explosive discharges without the need for manual grounding, ensuring safety for humans when in contact with the bag's surface.
